

### 3. Acts as meant to: stable and safe

The **easy to apply, industrial formulations** activate once the seed is planted in soil – and are especially effective under stress conditions.

The EPIVIO™ family complements the Syngenta Seedcare portfolio.

Looking for solutions to help your seedlings recover from stresses?

In combination with current Seedcare solutions

- The EPIVIO™ family of products brings innovation to the growing stress management and crop enhancement category
- It consistently demonstrates improved plant growth and establishment

## 1. Enables stronger plant growth

The EPIVIO™ family helps seedlings get the most from the soil, **enabling recovery from stresses and stimulating early plant vigor and growth.**

As strong seedlings grow, these young plants in return provide nutrients to the soil microflora, initiating a natural symbiotic cycle centered around the rhizosphere.

This cycle benefits both the plant and the surrounding soil and, ultimately, contributes to yield potential.

with  **Epivio™**

## 2. Works in harmony with other Seedcare products

Syngenta ensures that EPIVIO™ products are **compatible and mixable in tested Seedcare offers.**

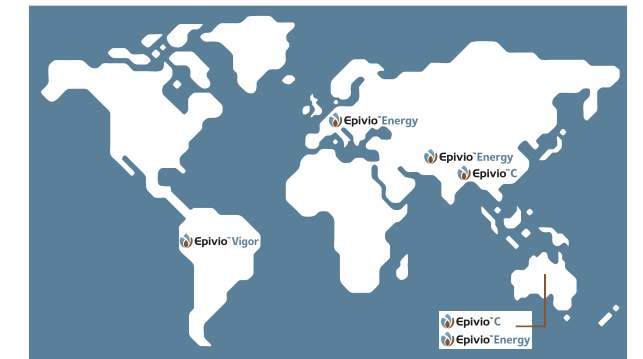

Combined with current Syngenta Seedcare products, the innovative solutions with EPIVIO improve conditions for seedling growth while addressing difficult-to-control pathogens, insects and nematodes, resulting in stronger plants.

**Tested on local varieties, with their specific soil and climate conditions,** the EPIVIO family of products consistently demonstrates improved plant growth and establishment, which benefits yield.
